Report-x_1

Method Development and Samples Preparation for MS

Service Project:

- x_PRJ_S-1

CONFIDENTIAL

Summary

A standardized method for clinical sample handling was developed and verified.

A complementary method for sample preparation was established to ensure consistency and reproducibility.

A detailed Standard Operating Procedure (SOP) was prepared and is available [here].

All samples were successfully extracted and transferred to the next unit in the workflow for mass spectrometry (MS) analysis.

This completes the scope of services provided by CBX under this project.
